ISEG control

Phone call 2017-03-09

iseg crate we have is rather old, not in production anymore.

The crate comes with the right most module with a "can bus" and it is via this it can be controlled.

A connection between the can-bus and a computer is achieved with the dsub9 connector (looks like VGA). To connect to computer a dsb9 <-> usb adapter is to be preferred (according to iseg). Do we have anyone of those in-house? Should be included in mail from iseg …

- Windows XP (32 bit)
- Windows 7 (32/64 bit)

Ordered dsb9-usb connector, supposed to arrive Thursday 23/3! The invoice/order is available in the map orders. These items have arrived. However, a dsb9 connector extender is needed. Possibly also a usb-usb extender in order to put the laptop at a desired place.
